This Week's Appreciated Sponsor:

History Moment: On September 30, 1954, the Navy commissioned the USS Nautilus, the world's first nuclear powered submarine. Developed by Russian-born Captain (later Admiral) Hyman Rickover, the driving force behind the Navy's nuclear program, the Nautilus stretched 319 feet in length and displaced 3,180 tons. She was decommissioned on March 3, 1980, after over 25 years of service and half a million miles underway.
